SPECIAL REPORT

STEM CELL AND REGENERATIVE THERAPIES FOR THE CHIROPRACTOR

DEAR FELLOW CHIROPRACTOR,

First, thank you for your interest in stem cell and regenerative therapies, as it applies to chiropractic, your practice, and – most importantly - your patients.

The drive of the majority of most chiropractors – the reason we became chiropractors – is the desire to heal patients and "make a real difference in their lives." Most of us were impacted by chiropractic, in one way or another, and that drove us to wanting to join the brother and sisterhood of chiropractic.

Stem cell therapy and regenerative therapy may be the very leading-edge protocols you are looking for. These therapies offer your patients healing and an improved quality of life. The results are nothing short of astonishing. Using these therapies, you can take patients from virtual disablement to potentially living a full life again. Imagine the joy you will experience after making such significant differences in your community, all the while avoiding the dangers of drugs and surgeries.

IS STEM CELL THERAPY (SCT) LEGAL FOR CHIROPRACTORS?

With the proper procedural protocols in place, yes it is. It is possible to offer stem cell and regenerative therapies without being an integrated practice, but to be short and honest, it will go much more smooth and offer higher profit margins if you do go the route of an integrated practice with an MD. But you will not need to "re-invent the wheel" as all of the research and development has already been perfected. In the past, implementing an integrated practice may not have seemed worth the effort, in your particular case. But you may want to re-evaluate the benefits now that stem cell and regenerative therapies are perfected and thriving, saving and enhancing so many lives in the USA.

WHAT KIND OF MARGINS CAN I EXPECT WITH SCT?

There is a broad range of potential costs and case fees related to SCT. But, in a thumb nail sketch, a typical case fee, for a one-time treatment, is around $4,500 with a profit of around $3,000. Now keep in mind this is the most rudimentary figure, but at least this will “ballpark” what you are looking at.

HOW ARE REGENERATIVE CELLS COLLECTED?

Regenerative Cell Treatment (RCT) is a revolutionary breakthrough treatment option for people suffering from inflammation, reduced mobility, sports injuries, tissue and ligament damage, or chronic pain. RCT is an injectable regenerative tissue matrix solution that often times leaves the patient feeling relief after only ONE treatment. This cutting edge treatment takes the best components from all the current non-invasive treatment options and puts them into one. This Regenerative Cell Treatment is collected from mother's who have donated their placental tissue after delivering a child by C-section birth. These types of cells are the most potent and impactful of all legal options. But know this is 100% legal in the USA and without any of the potential stigmas and controversy.

IS REGENERATIVE CELL THERAPY SAFE?

Absolutely! Regenerative Cell Therapy is an extremely safe treatment option and adheres to stringent FDA regulations. There is virtually no risk to the patient in terms of health dangers, certainly as opposed to allopathic medicine.

WHAT DETERMINES THE OUTCOME OF MY REGENERATIVE CELL THERAPY?

Various factors will determine the outcome of Regenerative Cell Therapy treatment, such as the extent of damage, disease and the location being treated. Most people respond well to this therapy option and experience relief from pain in just a short period of time. For instance, this therapy has been known provide full relief to patients after only one treatment. (NOTE: This does not guarantee to be the case in every instance.)

HOW LONG DOES THE REPAIR PROCESS TAKE?

Generally, the repair process begins immediately and the worthy news is that it can continue to repair for up to eight additional months from the date of the initial procedure. Most patients report feeling better within days. And it's incredible how quickly RCT begins to make positive impact on most conditions.

HOW OFTEN DOES THE PROCEDURE WORK?

Regenerative Cell Therapy has remarkable results on a wide range of conditions. Most people generally feel significant, if not complete, relief from this non-surgical procedure. In a recent study from an amniotic manufacturer, they found that in a group of over 60 participants the average pain scale went from an 8 to a 0 in just 5 weeks for all the participants! Can the procedure fail? Like any other procedure there is no 100% guarantee. In certain cases, it is possible that you may need additional treatments or your stem cells do not have enough repair potential relative to the severity of the disease or ailment.

NOTE:

Stem Cell Institute of America will inform you of upcoming webinars, which you can attend via phone or by computer in the upcoming months. Or, you can have questions answered immediately by calling 800-391-6040, or if you prefer, by emailing elliott@pbs500.com.
